Schultz, Martin

Entering the neat brick administration building through an ultra-modern lobby, you glide along a smooth, polished floor past offices containing very high-tech, stand-alone computer monitors. Reaching the conference room you notice that the walls are covered in faux wallpaper. The central feature in the room beside the table is a large glass cabinet containing trophies recognizing numerous business awards and sports victories. Lots of awards, including the Weatherhead Family Firms Distinction Award (2000), the Gold Medal "Best of Show" Award (1997, 1998, 1999 and 2000), the 2001 Weatherhead 100 Winner (for being one of the 100 fastest-growing firms in Northeast Ohio) and numerous Superior Product Awards for its Grandpa's Choice kettle chip, deli-style tortilla chips and cheese popcorn.

CHIP REPAIRER MEMORY CORP TWEAKS ITS PRODUCT LINE AND PRAYS FOR PRICES TO START HARDENING AGAIN

(Scottish good-chips-for-bad pioneer Memory Corp Plc has released a new range of smaller, better-looking memory chips with embedded security)

Computergram International, n 2919, p N/A

May 23, 1996

DOCUMENT TYPE: Newsletter ISSN: 0268-716X (United Kingdom)

LANGUAGE: English RECORD TYPE: Fulltext

WORD COUNT: 532

ABSTRACT:

The **price** of memory chips continues to plummet, but Scottish good-chips-for-bad pioneer Memory Corp Plc refuses to quit as the going gets tough, and has instead released a new range of smaller, better-looking memory chips with embedded security. The new MN product range is based on the company's proprietary Variance Controlled Memory technology. A unique electronic identity code in each chip, together with an external bar code printed on the unit, enables Memory to track the complete manufacturing history and shipping details of that module, and any stolen devices become fully traceable. More importantly perhaps, the memory chips will only function if the installation disk and chip have the same security code, which is bad news for the notorious chip thieves. The article contains more discussion.

An overview of VLSI memory yield management by injection of fault tolerance
Mehdi, Kamal A; Kontoleon, J M
International Journal of Quality & Reliability Management v11n3 PP: 43-54
1994 ISSN: 0265-671X JRNL CODE: IJQ
WORD COUNT: 3885

ABSTRACT: The demand for increased density of bits per chip in very large-scale integrated (VLSI) memories has placed a severe restriction on the memory chip cost because of the degraded yield caused by the increased chip area and resulting in the increased defect level associated with smaller feature size. On-chip fault tolerance has thus far proven to be more cost-effective than developing new processing equipment to achieve higher memory chip yield. However, existing fault tolerance methods used in present-day technology for the yield enhancement of memory chips bear the disadvantage of being associated with a relatively large area overhead, which results in additional costs in terms of the silicon used as well as a lower number of chips per wafer. It is shown that the production improvement achievable by using the word redundancy approach is significant even for smaller arrays.

Teaching big brother to be a team player: Computer monitoring and quality
Griffith, Terri L
Academy of Management Executive v7n1 PP: 73-80 Feb 1993 ISSN: 0896-3789
JRNL CODE: AEX
WORD COUNT: 4653

ABSTRACT: Computer monitoring should not be seen as a way of gathering information about workers, but rather as one part of a production and quality strategy that provides needed information to a diverse team of workers. In its most powerful and effective form, computer monitoring is the use of computers to collect, process, and provide feedback information about work with the intent of improving performance and developing employees. Unfortunately, computer monitoring has also been used to punish employees. A study of a successful computer monitoring system at Hughes Aircraft Company is described. The study shows that computer monitoring can facilitate integrated production and quality control strategies without negative effects on employee quality of work life. Managers who wish to design and effectively use computer monitoring systems should use the monitoring system to provide feedback data to the workforce not to gather social information.

AKN Technology Bhd is set to be a regional player in cutting-edge semi-conductor and nano technologies after its recent investment of a total RM40.58mil in Nanochip Inc, JIT Technology (M) Sdn Bhd, Inpro Technology Co Ltd and Autoplus International Group Ltd.

Its executive chairman Datuk Ahmad Kabeer Mohamed Nagoor told Star Business that the RM17.5mil acquisition of a 55% stake in Autoplus International Group was the most important of the four acquisitions and would be a leading contributor to the group's turnover in the near future.

**Gemplus Estimates That Management Restructuring Will Cost Approximately 25
Million Euros in 2001**
BUSINESS WIRE
December 26, 2001
JOURNAL CODE: WBWE LANGUAGE: English RECORD TYPE: FULLTEXT
WORD COUNT: 922

LUXEMBOURG--(BUSINESS WIRE)--Dec. 26, 2001--Gemplus International S.A. has made a preliminary estimate of the costs that it will incur in connection with the changes in its management decided at its Board meeting of December 19, 2001. At that board meeting, Gemplus accepted the

resignation of Antonio Perez as President and CEO of Gemplus International SA, and the cessation of Marc Lassus as Chairman of its Board of Directors.

In connection with his resignation, Mr. Perez has agreed to return to an indirect subsidiary of Gemplus the remaining 12 million Gemplus shares that he received when he was recruited. It is the company's intent to cancel these shares. Mr. Perez had previously returned approximately 18 million shares to partially reimburse four loans that were made to him by the indirect subsidiary. The value of the 12 million shares is not expected to be sufficient to reimburse the remainder of the loans in full. The unreimbursed portion of the loans will be cancelled, resulting in a charge to the consolidated earnings of Gemplus. The amount of that charge is estimated based upon the Euronext Paris S.A. First Market closing price of Gemplus shares on December 19, 2001. Mr. Perez is also entitled to a tax reimbursement on the portion of the loan that has been forgiven. In addition, Mr. Perez will receive a 1 million U.S. dollar severance payment. Based on the December 19, 2001 share price of 2.86 euros, the total charges associated with Mr. Perez would be approximately 12 million euros.

(BW) Gemplus Reports Second Quarter Results; Company Successfully Implements Restructuring Program and Builds Financial Services Business
BUSINESS WIRE

August 01, 2001

JOURNAL CODE: WBWE LANGUAGE: English RECORD TYPE: FULLTEXT
WORD COUNT: 1237

LUXEMBOURG--(BUSINESS WIRE)--Aug. 1, 2001--Gemplus International S.A. (Euronext:Sicovam 5768) (Nasdaq:GEMP) today reported results for the second quarter ended June 30, 2001. Revenue for the second quarter was 252 million Euros, down 8% from the same quarter a year ago. Operating loss, before restructuring, was 12 million Euros, compared with an operating profit of 34 million Euros for the same quarter a year ago. Operating loss, after restructuring, was 41 million Euros. Net loss for the second quarter, including restructuring, was 40 million Euros, or 0.06 Euro per fully diluted share. Net loss for the quarter, excluding restructuring, was 21 million Euros, or 0.03 Euro per diluted share.

"Our second quarter operating results reflect the progress we have made in strategically repositioning the company," said Antonio Perez, president and CEO. "We have adjusted and realigned our resources to exploit the opportunities in the Telecommunications, Financial Services and E-Business Security Applications markets."

Gemplus Sells SkiData to Swiss 'Kudelski S.A.'; Deal Valued at Euro 140 Million

BUSINESS WIRE

June 25, 2001

JOURNAL CODE: WBWE LANGUAGE: English RECORD TYPE: FULLTEXT
WORD COUNT: 902

LUXEMBOURG and CHESEAUX-SUR-LAUSANNE, Switzerland--(BUSINESS WIRE)--June 25, 2001--Gemplus International S.A. (Euronext:Sicovam 5768 and Nasdaq:GEMP) announced today that it has reached an agreement with Kudelski S.A. (SWX:KUD) for the sale of SkiData AG, its leading electronic access-control solutions business unit. The transaction values the SkiData enterprise at 140 million Euro. Under the terms of the agreement, Kudelski S.A. will pay partly in cash and partly in shares. The agreement includes provisions that protect the value and liquidity of the share component to Gemplus. The transaction is expected to close within the next two months subject to customary closing conditions.

Gemplus indicated that this transaction was the result of an ongoing strategic process to further focus on its key growth markets. "Since the days leading to our IPO, we have openly discussed our strategic intent to focus on three important markets: Telecommunications, Financial Services and E-Business Security," said Antonio Perez, President and CEO of Gemplus. "The sale of SkiData results from the implementation of this strategy and reflects our belief that by concentrating our resources and attention on

these high growth market segments, we will be much better aligned to achieve the vast potential that they represent."

Gemplus Reduces Expectations For 2001; Lower SIM Card Revenue Expected Due To Wireless Market Slowdown

LUXEMBOURG, SENNINGERBERG--Gemplus International S.A. (Euronext: Sicovam 5768 and Nasdaq:GEMP) today announced that results for its second quarter and fiscal year would be lower than previously expected. The company indicated that due to a slowdown in GSM subscriber growth and inventory issues at operators, it was reducing its expectations for the quarter and remainder of the year. The company now expects revenue for the second quarter to be approximately 265 million Euro, which would be down 4% from the same quarter a year ago. Operating loss for the quarter, excluding restructuring charges, is expected to be 10-15 million Euro. For the full year, the company expects revenue to be 1,225 to 1,265 million Euro, or 2-5% growth from FY2000 levels with operating profit, before restructuring charges, between 5 and 35 million Euro.

Gemplus Reduces Expectations for 2001; Lower SIM Card Revenue Expected Due to Wireless Market Slowdown

BUSINESS WIRE

June 06, 2001

JOURNAL CODE: WBWE LANGUAGE: English RECORD TYPE: FULLTEXT

WORD COUNT: 1448

LUXEMBOURG--(BUSINESS WIRE)--June 6, 2001--Gemplus International S.A. (Euronext: Sicovam 5768 and Nasdaq:GEMP) today announced that results for its second quarter and fiscal year would be lower than previously expected. The company indicated that due to a slowdown in GSM subscriber growth and inventory issues at operators, it was reducing its expectations for the quarter and remainder of the year. The company now expects revenue for the second quarter to be approximately 265 million Euro, which would be down 4% from the same quarter a year ago. Operating loss for the quarter, excluding restructuring charges, is expected to be 10-15 million Euro. For the full year, the company expects revenue to be 1,225 to 1,265 million Euro, or 2-5% growth from FY2000 levels with operating profit, before restructuring charges, between 5 and 35 million Euro.

"All our businesses are doing extremely well except for the wireless segment of our Telecommunications division. We are experiencing a softening in SIM card demand due to a slowdown in GSM subscriber growth and inventory issues at operators," said Antonio Perez, president and chief executive officer, "The wireless segment is approximately 50% of our business and therefore significantly impacts our total company performance. We believe this is an industry-wide phenomenon and that we are, in fact, maintaining if not gaining market share."

Gemplus Reports First Quarter Financial Results; Company Announces Plans to Improve Financial Competitiveness

BUSINESS WIRE

May 02, 2001

JOURNAL CODE: WBWE LANGUAGE: English RECORD TYPE: FULLTEXT

WORD COUNT: 1217

LUXEMBOURG--(BUSINESS WIRE)--May 2, 2001--Gemplus International S.A. (Euronext: Sicovam 5768) (Nasdaq:GEMP) today reported results for the first quarter ended March 31, 2001. Revenue for the first quarter was 294 million Euros, up 27% from the same quarter a year ago. Operating loss was 2.5 million Euros, compared with an operating profit of 14 million Euros for the same quarter a year ago. Net loss for the first quarter was 7 million Euros, or 0.01 Euros per diluted **share**.

"Our 27% revenue growth this quarter was very solid in what clearly have been challenging business conditions," said Antonio Perez, president and chief executive officer. "Dataquest's recent industry summary for the year 2000 clearly shows Gemplus as the market **share** leader for both the entire smartcard market and the SIM card segment. Moreover, the report showed a 3 percentage point gain in our overall marketshare. We believe this trend continued into the first quarter."

Taiwan DRAM makers downshift 128Mb DRAM production plans

TAIWAN ECONOMIC NEWS

September 05, 2000

JOURNAL CODE: WTEN LANGUAGE: English RECORD TYPE: FULLTEXT

WORD COUNT: 409

Taipei, Sept. 4, 2000 (CENS)--Taiwan's major DRAM (dynamic random access memory) makers, including Winbond Electronics Corp., ProMos Technologies Inc., Nan Ya Technology Inc., and PowerChip Semiconductor Corp. will slow down plans to produce 128Mb DRAM. One of the reasons cited by the firms is the continuing dominance of 64Mb chips as the standard memory in computers. The defect-free ratio of 128Mb DRAM production using 0.18-micron technology, they add, remains low. Early this year, Winbond reported that it would use 0.175-micron technology to increase its output of 128Mb DRAM, but lamented the low contract prices of the larger chips, which at US\$16 are just double the **price** of the 64Mb chips. PowerChip spokesman C.M. Tang notes that an eight-inch wafer yields 844 **defect**-free 64Mb DRAM **chips** using 0.18-micron processing technology, more than double the amount of **defect**-free 128Mb **chips**. The high **defect**-free ratio has encouraged most DRAM makers to devote their output to 64Mb DRAM. ProMos spokesman Y.C. Lin said that 128Mb DRAM would soon replace 64Mb DRAM chips. His company will produce DRAM using 0.17-micron technology, with 128Mb chips accounting for 80% of total output. This year, Winbond has devoted around 40% to 50% of its DRAM production to 128Mb chips--the highest ratio among all domestic suppliers. ProMos will begin producing 128Mb DRAM in the fourth quarter this year, devoting about 20% of its capacity to the larger chips. Nan Ya and PowerChip will produce 128Mb DRAM on a trial basis, with output limited to only 2% of its total production. ProMos said that it cost US\$1.90 to make a 128Mb DRAM chip. It estimated that the chip will become the standard memory size next year, it said, adding that the net margin on the chips can exceed 65% once the defect-free ratio is reduced. According to market analyst Dataquest of the United States, average prices for 128Mb DRAM will post at US\$16 a chip next year, slip to US\$14 in 2002, and fall to US\$6 in 2003, when chipmakers ramp up 12-inch silicon wafer fabrication plants. The 12-inch wafers are far more efficient than their eight-inch predecessors due to the higher chip yields obtainable. Winbond, ProMos,

PowerChip, Nan Ya, and Vanguard International Semiconductor Corp. estimate that they will earn around NT\$100 billion (US\$3.22 billion at US\$1:NT\$31), or NT\$10 (US\$0.322) per **share**, on 64Mb DRAM in 2001, based on estimated chip **price** of US\$7. They forecast total output next year to amount to 100 million to 350 million chips.

ISSN: 0011-6963 LANGUAGE: English RECORD TYPE: Fulltext; Abstract
WORD COUNT: 4290 LINE COUNT: 00357

ABSTRACT: Before selecting a network operating system for an intranet, it is important to get a clear idea of future networking and information requirements. Failure to do so may limit the intranet's growth, and may ultimately require an entirely new system to be deployed to accommodate growth. Before selecting the NOS, the required applications, clients, servers and utilities should be examined. After a list has been generated, different NOSs can be compared to see which support the greatest amount of listed items. In some cases, a multiplatform intranet will be needed to accommodate all the applications and clients on the intranet. The multiplatform intranet provides for a greater variety of applications and cuts down on retraining expenses. Further, basing an intranet on newer technologies that are not yet widely supported may eventually result in a system that is not compatible with other products.

Abstract

WORD COUNT: 1391 LINE COUNT: 00122

ABSTRACT: The increasing size of semiconductor wafers to 300-mm diameter and the declining size of integrated circuit (IC) features into the 0.18-micron range are driving the growing need for improved chip testing and process monitoring and measurement. These must ensure the integrity of the wafer, the lab and the quality and performance of the devices. The measurement technologies must also address the quantum effects that come into play with finer feature sizes and declining thin-film thicknesses. Other factors that are promoting chip production monitoring include chemical-mechanical polishing and other advanced planarization technologies, the need to reduce overall inspection costs, and the IC makers desire for near-100% yield in back-end assembly. Front-end-of-line testing largely involves contamination detection, while back-end-of-line testing requires a greater variety of tests.

RECORD TYPE: FULLTEXT; ABSTRACT

WORD COUNT: 7827 LINE COUNT: 00614

ABSTRACT: Math coprocessors can greatly improve microcomputer performance, but increases in speed are dependent upon the type of software being used, so math coprocessors are not necessary for most users. Coprocessors perform floating-point operations more efficiently than general-purpose microprocessors can, but most applications require few floating-point calculations. Engineering and scientific applications that use transcendental functions are likely to benefit coprocessors, and some computer-aided design applications benefit. Intel Corp's 80387, Cyrix Corp's 83D87 and EMC87 and Integrated Information Technology Inc's 3C87 offer similar performance gains, but Intel's 80486 chip outperforms all four coprocessor and microprocessor combinations on the benchmark tests. Coprocessor performance should not vary significantly in everyday use.

WORD COUNT: 2773 LINE COUNT: 00222

ABSTRACT: Four European electronics manufacturers, ITT Semiconductors Group, Siemens AG, Philips International B.V. and SGS-Thomson Microelectronics, depend upon service and quality to ensure their success in the marketplace. ITT produces specialized chips, and throughout a chip's design and production, ITT and client engineers work together to create or redesign the chips to benefit the client and profit ITT. Siemens also cooperates with customers during all phases of a project and provides self-test features and post-sales services such as a problem hotline and a Teleservice connection to run diagnostics tests over the phone line. Philips uses input from customer workshops to design its products. SGS-Thomson grades its divisions on speed each week and implements 'ship-to-stock' distribution, which eliminates the need for client chip-testing by ensuring that **chips** are free of **defects**.

ABSTRACT: The conflict within organizations that is created by internal differences can expand the management and planning options available to those organizations by creating new points of view. Conflict in organizations tends to occur in very predictable areas. The areas of conflict include strategy, planned versus opportunistic; structure, elitist

versus pluralist; and systems, mandatory versus discretionary. Organizations should seek a synthesis of planned and opportunistic strategy to enhance the development of new ideas. The structure of each of the departments in an organization should be strong enough to be at parity with competition, but must be able to respond to market demands in ways that cross department boundaries. Systems should emphasize themes such as quality and cost management.

ABSTRACT: The HP PA 8000 RISC CPU was extensively tested with postsilicon electrical verification, which uses both functional verification and environmental testing techniques to improve product quality. Electrical verification repeatedly exercises a chip's logic states, state transitions and signal paths under stressful conditions. Electrical verification commences with a shmoo plot, in which a test is repeated while varying the parameters, such as clock frequency or IC manufacturing process. Verifying the repeatability of a shmoo anomaly is a vital and often onerous task. The next step is to classify the source of the shmoo anomaly. The list of possible sources includes self-checking code, final-state error and framework code. Once a bug has been corrected, its worst-case test is added to a special ROM called the 'golden ROM.' HP engineers use the golden ROM to detect bug patterns and reappearances.

WORD COUNT: 8545 LINE COUNT: 00671

ABSTRACT: HP's PA 7100LC microprocessor is intended to be used in a new series of low-cost, function-rich workstations and servers; it is designed to provide the system performance required for its target markets at an aggressively low system cost. The chip was designed on a schedule that made possible HP's steepest computer system production ramp to date. The specific features of the microprocessor were decided upon only after deciding between the various trade-offs in terms of cost, schedule, and performance; areas involved were cache organization, number of execution units and superscalar design, pipeline organization, floating-point functionality, package technology, degree of integration, and multimedia enhancements. Methodologies affected by feature-set decisions included synthesis, place and route, behavioral simulation, presilicon functional verification, postsilicon functional and electrical verification, and production test. The design decision process is examined.

ABSTRACT: Math coprocessors can greatly improve microcomputer performance, but increases in speed are dependent upon the type of software being used, so math coprocessors are not necessary for most users. Coprocessors perform floating-point operations more efficiently than general-purpose microprocessors can, but most applications require few floating-point calculations. Engineering and scientific applications that use transcendental functions are likely to benefit coprocessors, and some computer-aided design applications benefit. Intel Corp's 80387, Cyrix Corp's 83D87 and EMC87 and Integrated Information Technology Inc's 3C87 offer similar performance gains, but Intel's 80486 chip outperforms all four coprocessor and microprocessor combinations on the benchmark tests. Coprocessor performance should not vary significantly in everyday use.

ABSTRACT: Four European electronics manufacturers, ITT Semiconductors Group, Siemens AG, Philips International B.V. and SGS-Thomson Microelectronics, depend upon service and quality to ensure their success in the marketplace. ITT produces specialized chips, and throughout a chip's design and production, ITT and client engineers work together to create or redesign the chips to benefit the client and profit ITT. Siemens also cooperates with customers during all phases of a project and provides self-test features and post-sales services such as a problem hotline and a Teleservice connection to run diagnostics tests over the phone line. Philips uses input from customer workshops to design its products. SGS-Thomson grades its divisions on speed each week and implements 'ship-to-stock' distribution, which eliminates the need for client chip-testing by ensuring that **chips** are free of **defects**.
